## ECONOMIC DEVELOPMENT

GREYSTONE RECENTLY FACILITATED A PRESENTATION FROM GRADY HEALTH SYSTEM REGARDING THEIR UPCOMING SOUTH FULTON COUNTY FACILITY AND ENGAGED IN PRODUCTIVE DISCUSSIONS CONCERNING WORKFORCE DEVELOPMENT IN PAULDING COUNTY.

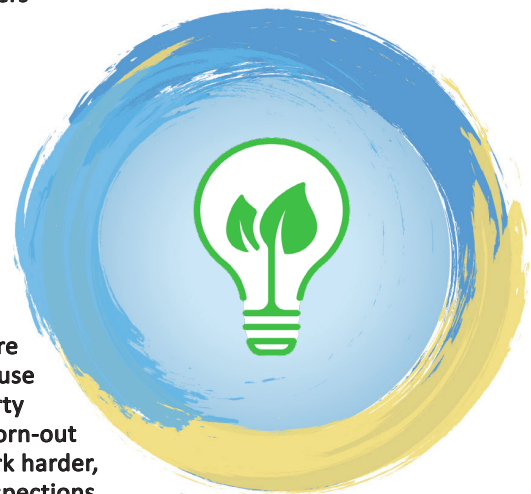

## SUMMER ENERGY SAVINGS

Summer is fast approaching, and GreyStone is here to help you save energy and money. Servicing your HVAC system before extreme temperatures hit ensures efficiency, reliability and comfort. Make sure to check out [greystonepower.com/save-moneynenergy](http://greystonepower.com/save-moneynenergy), where you can find rebates, energy-saving tools and tips. GreyStone members are also saving on residential rates and paying 24% less than Georgia Power customers for 1,500 kWh, according to the Georgia Public Service Commission's Residential Rate Survey.

Want to save even more on your total monthly cost of electricity? Regular HVAC maintenance is essential for peak performance. A well-maintained system runs more efficiently, reducing energy use and lowering utility bills. Dirty filters, clogged ducts and worn-out parts make your system work harder, driving up costs. Routine inspections also prevent costly breakdowns by catching minor issues before they turn into major repairs.

Like a car, an HVAC system lasts longer with regular tuneups, delaying expensive replacements. Additionally, clean filters improve indoor air quality by reducing dust, allergens and pollutants, creating a healthier home environment.

Heating and cooling typically account for more than half of your electricity bill. To save money, the Department of Energy recommends setting your thermostat to 78 degrees in summer and 68 degrees in winter. Adjusting the temperature when away can prevent unnecessary energy use, and gradual changes upon returning home help avoid overworking your system. Scheduling service in early spring and fall ensures your system is ready for the season ahead. GreyStone is committed to helping you save money by saving energy. That's making life better.
